Enterprise AI Architecture Permit · Use-Case Review

CGI

Pittsburgh · 412.287.8640 · russelldudek@gmail.com

russelldudek.github.io/cgi/ · github.com/russelldudek/cgi

PURPOSE

A one-page mechanism that turns architecture review into an explicit disposition: Permit, Conditional Permit or Hold. Candidate-designed; not a claim about CGI's current process.

USE CASE / SPONSOR
Outcome, user and owner of the business consequence.
RISK TIER / DISPOSITION
Low ■ Medium ■ High ■ Permit ■ Conditional ■ Hold ■
USE-CASE LOAD / REFERENCE PATTERN
Volume, latency, availability, cost and consequence. RAG / Document intelligence / Agentic / Other.
DATA + IDENTITY BOUNDARY / HUMAN AUTHORITY
Sources, residency, entitlements and least privilege. Recommend, decide or execute? Approval, stop and rollback path.
EVALUATION CONTRACT / OBSERVABILITY CONTRACT
Acceptance, groundedness, safety, regression and human review. Quality, cost, latency, drift, incidents and recovery.
CONDITIONS / EXCEPTIONS / EXPIRY
Every condition has an owner and date. Every exception is explicit, monitored and reassessed.
Decision rationale + reusable learning
What did the review reveal about the platform, pattern catalog or governance system?

DISPOSITION KEY

Permit

Bounded pattern, approved controls, evidence, telemetry and named ownership.

Conditional

Direction is sound; owned, measurable conditions must be met before release.

Hold

Outcome, boundary, evidence, visibility or ownership is too weak for responsible commitment.

REVIEW SEQUENCE

- 01 Define the load: outcome, behavior, scale, cost and consequence.
- 02 Select the bounded pattern: shared services and legitimate variation.
- 03 Bind controls: identity, data, security, authority, escalation and rollback.
- 04 Specify evidence: acceptance, evaluation, red-team and regression.
- 05 Instrument operation: quality, cost, drift, incidents, recovery and adoption.
- 06 Transfer ownership: technical, business, risk and operating owners plus evolution cadence.
