

ARCHITECTURE PROFILE

Operator-technologist who turns complex technical work into visible standards, governed workflows and adopted operating mechanisms. Direct experience spans agentic workflow patterns, RAG, human authority, evaluation, telemetry, high-reliability engineering and enterprise operations. Connects business consequence, technical constraints, evidence and sustainable ownership.

EXPERIENCE · CURRENT ROLES FIRST, THEN REVERSE CHRONOLOGY

Director of Operations

2025–Present

Vape-Jet

- Leads AI-first operating transformation across production, purchasing, quality, customer success, support, engineering issue flow, ERP/Odoo, Jira, HubSpot, Slack, telemetry and AI-assisted workflows.
- Connects factory, field, customer and machine-fleet signals into prioritized work, earlier risk detection, cleaner handoffs, dashboards, standard work, training and accountability.
- Works in a software-enabled robotics and machine-vision environment with approximately 1,000 fielded robots informing support and operating feedback loops.

Founder / AI and Automation Advisor

2017–Present

DudeWorth

- Develops AI-readiness and opportunity frameworks assessing value, feasibility, data readiness, governance, adoption burden, reuse and time-to-value.
- Designs agentic workflow patterns using structured context, retrieval, AI agents, human judgment, escalation, decision records, evaluation and governance rails.
- Advises on AI-enabled operations, logistics technology, warehouse automation, AMRs, ASRS, cobots, transportation systems, network analysis and workflow design.

Regional Director

2021–2023

Cardinal Building Products

- Built the company's first remote regional operation and modernized distributed customer, CRM, commercial, fulfillment, logistics, digital marketing, SEO and online-buying workflows.
- Advanced AI-enhanced transportation-management and route-planning concepts.

Chief Pilot, Autonomous Systems and Aerial Data Operations

2018–2022

ZeusVu

- Led regulated drone operations across medical, energy, logistics, real-estate and restricted-airspace contexts with a 100% safety record and no FAA incidents.
- Developed TensorFlow-based aerial-inventory concepts and designed medical delivery and chain-of-custody concepts connecting technology, risk, stakeholders and governed execution.

ROLE ALIGNMENT

- Architecture:**
reference patterns, integration boundaries, standards and decision records.
- GenAIOps:**
RAG, agents, evaluation, observability, human-in-the-loop design and governance.
- Operating model:**
intake, review cadence, escalation, ownership and learning loops.
- Communication:**
translation across technical, operational, executive and customer stakeholders.

TECHNICAL TOOLKIT

Agentic AI · LLM workflows · RAG patterns
Human-in-the-loop · Python · SQL
JavaScript · TensorFlow · Tableau
Odoo/ERP · Jira · Confluence
HubSpot · Slack · GIS

ARCHITECTURE POSTURE

Define the use-case load. Select a reusable pattern. Bind security and human authority. Specify evaluation and operating evidence. Use exceptions and telemetry to evolve shared services. Transfer sustainable ownership.

VERIFIED SCALE

Approximately five million second-day orders annually in a 24/7 Amazon operation.

Approximately 1,000 fielded robots informing operating feedback loops.

100% safety record with no FAA incidents in regulated drone operations.

ARCHITECTURE EVIDENCE MAP

HIGH RELIABILITY	OPERATING MECHANISMS	AI WORKFLOW DESIGN	PRODUCTION LEARNING
Quality systems, traceability, root cause and acceptance standards shaped in advanced-electronics programs.	Standard work, scorecards, escalation and ownership designed for complex 24/7 and industrial operations.	RAG, agents, structured context, evaluation, human authority and governance rails designed directly.	Telemetry, incidents, recurring exceptions and feedback loops converted into prioritized operating improvement.

EXPERIENCE CONTINUED

Operations Management / Site Leader 2014–2018

Amazon

- Led launch and execution for Amazon Prime Pittsburgh in a 24/7 customer-backward environment supporting approximately five million second-day orders annually.
- Built leadership routines, labor planning, throughput visibility, escalation paths, standard work and operating mechanisms.
- Applied Lean and Gemba practices across safety, quality, throughput, customer experience and team engagement; contributed to Prime Air research and Amazon Flex geolocation concepts.

Chairman of the Board 2014–2017

Enviro Social Capital

- Co-founded and led a public-private impact initiative focused on sustainable infrastructure, green finance and civic transformation.
- Helped shape and evaluate a \$200 million Social Impact Bond feasibility concept for Pittsburgh sewage and green-infrastructure improvement.

CMPT and EDS Pittsburgh Chapter Chair 2012–2016

IEEE

- Led regional technology programming connecting industry, academia, STEM outreach, electronics, manufacturing and emerging technology.

Director of Operations and Engineering Management 2000–2013

Compunetics

- Progressed through R&D program management, production management, strategic acquisition, operations management and director-level leadership.
- Led engineering, manufacturing, quality, customer delivery and complex technical programs in advanced electronics and high-reliability environments.
- Built quality systems, standard work, root-cause practices, performance measures and process controls; collaborated with high-consequence customers and partners including DoD, CERN, Intel and AMD.

EDUCATION

University of Pittsburgh

Bachelor of Science

Academic grounding includes materials science, physical chemistry and biology-related studies.

CREDENTIALS

Google AI Essentials

IBM Enterprise Design Thinking Practitioner

Six Sigma Certification

OSHA 10

WHAT THE RECORD SUPPORTS

- Lead architecture conversations where standards must survive contact with operations.
- Convert recurring decisions into review mechanisms, scorecards, reusable patterns and decision records.
- Keep human authority, escalation, exception and rollback paths explicit in AI-enabled workflows.
- Use telemetry and recurring exceptions to improve shared services without erasing legitimate domain variation.
- Transfer capability through visible ownership, runbooks, training and operating cadence.

EVIDENCE BOUNDARY

Russell does not claim prior ownership of CGI's exact centralized GenAIOps platform. The relevant case is adjacent: complex technical systems, reusable operating patterns, governed execution and direct AI workflow design.

CANDIDATE VISION

Enterprise AI Building Code · Architecture Permit Review · 90-day entry plan
russelldudek.github.io/cgi/

TRANSFERABLE ARCHITECTURE CONTRIBUTION

MAKE DECISIONS VISIBLE

Translate business consequence, technical boundaries and evidence into explicit decision records.

BIND HUMAN AUTHORITY

Keep approval, escalation, stop, exception and rollback paths legible in AI-enabled work.

BUILD FOR OWNERSHIP

Create reusable mechanisms, runbooks, training and operating cadence that survive handoff.

EVOLVE FROM EVIDENCE

Use telemetry and recurring exceptions to improve shared services without erasing legitimate variation.
