PURPOSE

A one-page mechanism that turns architecture review into an explicit disposition: **Permit, Conditional Permit or Hold**. Candidate-designed; not a claim about CGI's current process.

USE CASE / SPONSOR Outcome, user and owner of the business consequence.		RISK TIER ☐ Low ☐ Medium ☐ High ☐ Regulated	DISPOSITION ☐ Permit ☐ Conditional ☐ Hold
USE-CASE LOAD Volume, latency, availability, cost and consequence.	REFERENCE PATTERN RAG / Document intelligence / Agentic / Other	CLOUD BOUNDARY Azure / AWS / GCP / Hybrid / On-premise	INTEGRATION BOUNDARY APIs, events, workflows, repositories and providers.
DATA + IDENTITY BOUNDARY Sources, classification, residency, retention, entitlements, propagation and least privilege.		HUMAN AUTHORITY Recommend, decide or execute? Approval threshold, stop and rollback path.	
EVALUATION CONTRACT Acceptance, task success, groundedness, safety, adversarial cases, regression and human review.		OBSERVABILITY CONTRACT Quality, cost, latency, retrieval/tool behavior, drift, approvals, exceptions, recovery and adoption.	
CONDITIONS / EXCEPTIONS / EXPIRY Every condition has an owner and date. Every exception is explicit, monitored, time-bounded and reassessed.			

Decision rationale + reusable learning

☐ P ☐ C ☐ H

What did the review reveal about the platform, pattern catalog or governance system?

DISPOSITION KEY

Permit Bounded pattern, approved controls, acceptance evidence, telemetry and named ownership.	Conditional Direction is sound; owned, measurable conditions must be met before release or capability enablement.	Hold Outcome, boundary, evidence, visibility or ownership is too weak for responsible commitment.
--	---	---

REVIEW SEQUENCE

- 01 Define the load.** Outcome, behavior, scale, cost and consequence.
- 02 Select the bounded pattern.** Shared services and legitimate variation.
- 03 Bind controls.** Identity, data, security, authority, escalation and rollback.
- 04 Specify evidence.** Acceptance, evaluation, red-team and regression before sunk-cost pressure.
- 05 Instrument operation.** Quality, cost, drift, incidents, recovery and adoption.
- 06 Transfer ownership.** Technical, business, risk and operating owners plus evolution cadence.

Exception discipline

Record the standard varied, reason, risk acceptance, compensating control, telemetry, owner, expiry and reassessment trigger. Repeated exceptions may signal a missing platform service or an unrealistic standard.

Promotion rule

A solution becomes a reference pattern only after repeatable implementation and production evidence show leverage without hiding domain-specific risk.
